Health Impacts of Extreme Heat & Wildfire Smoke Guideline Checklist Health Plans Level 1

dr. robert BREE collaborative

The current state of the issue

Exposure to extreme heat, or summertime temperatures that are much hotter and/or humid than average, [i] is a serious threat to population health and well-being. 2024 was the warmest year on record, with global temperatures 2.30 degrees Fahrenheit (1.28 degrees Celsius) above the National Aeronautics and Space administration's (NASA) 20th century baseline. [ii] The number and length of heat waves has increased significantly since the 1960s. [iii] These trends are projected to continue and worsen in the coming decades, exposing more people to the harmful consequences of heat. Higher air temperatures increase wildfire likelihood, posing a serious threat to human health, ecosystems, and infrastructure. Wildfire smoke exposure increases all-cause mortality, impacts respiratory health, and may co-occur and interact with heat exposure to impact cardiorespiratory morbidity and mortality. [iv] [v] [vi][vii]

Education

Educate members on how to stay safe and reduce exposure to heat and wildfire smoke during warmer months.

Incentives & Investments

- Explore mechanisms of reimbursement for equipment that mitigates harmful exposure to heat and wildfire smoke with considerations for priority populations.
 - Air conditioners, and/or portable heat pumps
 - Portable air cleaners
 - Mini-fridge or similar cooling devices for medications
 - Portable power supply for durable medical equipment

Planning & Preparedness

- Monitor heat and air quality using the NWS <u>Heat Risk tool</u> and Air Quality Index (including <u>WA</u> <u>Smoke Blog</u> and Ecology's <u>Air Monitoring Map</u>) and alert coordination staff and members about impending or current concerns in temperature or air quality.
- Promote existing Promote existing resources to members to monitor temperature and air quality for members to receive alerts (e.g., Washington DOH <u>emergency alerts</u>, <u>Air Now</u>)
 - If unable to sign up, ensure ability to provide outreach to members not able to receive or unable to use cell phones
- **Institute 90-day refill policy** for all possible medications (exception for controlled medications).
- **Expedite authorizations for transitions of care** for transfers to lower acuity settings to facilitate increased capacity for inpatient.
- **Participate in ongoing heat and wildfire smoke planning efforts** between public health departments, emergency response teams and healthcare delivery systems

Resources

- The Bree Report is meant to supplement these resources.
